

ABSTRACT**METHOD AND APPARATUS FOR APPLYING INFORMATION
REMOTELY VIA A MOBILE DEVICE**

5 A method and apparatus for applying information stored remotely to an
appliance via a mobile device are provided. The mobile device initiates the
process by sending instructions to a computer system via a network. The
instructions designate a first piece of information to be processed as well as the
10 appliance to which the information is to be applied. According to the
instructions, the computer system retrieves the first piece of information and
converts the information to a document suitable for the appliance. The
computer system then applies the document to the designated appliance.
